Body Politics and the Fictional Double Katie King 2000

This book focuses on the challenges women face when their externally defined identities and representations as bodies - their body fictions - speak louder than what they know to be their lived experience. As objects of interpretation, "female bodies" in search of health care, legal assistance, professional respect, identity confirmation, and financial security must first confront the fictionalized doubles. This volume includes reflections on women's day to day lives, as well as the cultural production (literature, MTV, film etc.) that give body fictions their powerful influence. By exploring how these fictions are manipulated politically, expressively and communally, contributors offer reinterpretations that challenge the fictional double while theorizing the discursive and performative forms that it takes.

De kracht van echte mannen David Deida 2015-12-22 In 'De kracht van echte mannen' wijst David Deida de moderne man de weg naar een daadkrachtig leven vol integriteit, authenticiteit en vrijheid. Het boek laat zien hoe een man een bevredigend leven kan leiden, door ruimte te geven aan de kern van zijn wezen: zijn mannelijkheid. Deida stelt dat de trend naar seksuele gelijkheid een belangrijke oorzaak is van het ontbreken van geluk in relaties. Het heeft namelijk niet alleen geleid tot economische en sociale gelijkheid, maar ook tot seksuele

neutraliteit. Nu we de gelijkheid tussen de seksen hebben geaccepteerd, zegt Deida, is het tijd om de eigen mannelijke of vrouwelijke essentie weer in ere te herstellen. En daarmee het vuur van de seksuele hartstocht opnieuw aan te wakkeren!

Do Gentlemen Really Prefer Blondes? Jena Pincott

2010-06-10 Q: Do Gentlemen Really Prefer Blondes? A:

Marilyn Monroe, Scarlet Johansson and Gwyneth Paltrow would be happy to know that they do. During the Ice Age, when even cavemen were in short supply, the blonde woman really did get her man - simply because her light coloured hair made her stand out. Plus scientists have recently discovered that natural blondes have higher oestrogen levels. In short, golden (preferably long) hair shouts : 'I am young, sexy - and fertile' to every member of the male species within a few miles. Q: When's the best time to seduce my man? A: Your other half will definitely get more possessive and more attracted to you when you're ovulating and at your most fertile. You'll spend time on your make-up and choose next day's outfit before you go to bed. Your lips will be fuller, and your skin will be radiant because of the high levels of oestrogen being pumped through your blood. But don't get carried away by how sexy you feel. You are also more likely to be unfaithful during this period and your boyfriend is also likely to run away with another equally fertile member of the female species. Q: How do I get him to change his wild lifestyle? A: Get pregnant. Shocking but true. Fathers have lower testosterone levels than single men which means that they are more easy-going and less confrontational, they take fewer life threatening risks, and they are far less likely to have an affair with the leggier, skinnier blonde from the office.

Meer denken over seks Alain de Botton 2012-09-07 Seks is een belangrijk onderdeel van ons leven en er is al veel over gesproken en geschreven. Alain de Botton doet dit op een geheel vernieuwende en verfrissende manier, waardoor je nieuwe inzichten krijgt in je al dan niet aanwezige seksleven. Weinigen van ons voelen zich 'normaal' als het gaat om seksualiteit, door ideeën die wij onszelf hierover opleggen. Alain de Botton bekijkt gevoelige onderwerpen als overspel, begeerte, pornografie en impotentie vanuit een subjectief standpunt, wat tot verrassende inzichten leidt. Volgens hem heeft een succesvol seksleven meer te maken met wat er zich in het hoofd van de mens afspeelt dan in zijn lichaam.

The Age of Scientific Sexism Mari Ruti 2015-07-30 We trust our sciences to operate on a plane of objectivity and fact in a world of subjectivity and cultural ideologies, but should we? In *The Age of Scientific Sexism*, philosopher Mari Ruti offers a sharp critique of the gender profiling tendencies of evolutionary psychology, untangling the insidious threads of various gender mythologies that have infiltrated-or perhaps even define-this faux-science. Selling stereotypes as scientific facts, evolutionary psychology continually brings retrograde models of sexuality into mainstream culture: it insists that men and women live in two completely different psychological, emotional, and sexual universes, and that they will consequently always be locked in a vicious battle of the sexes. Among these regressive arguments is the assumption that men's sexuality is urgent and indiscriminate, whereas women are "naturally" reluctant, reticent, and choosy-a concept constructed to justify masculine behavior, such as cheating, that women have historically found painful. On its most basic level, *The Age of Scientific Sexism* explores our impulse to "explain" romantic behavior through science: in the increasingly egalitarian gender landscape of our society, why are we so eager to embrace the rampant gender profiling that evolutionary psychology promotes? Perhaps these simplistic gender caricatures owe their popularity, at least in part, to our overly pragmatic society pragmatic society, which encourages us to search for easy answers to complex questions.

Do Chocolate Lovers Have Sweeter Babies? Jena Pincott 2012-12-15 Jena Pincott writes about the quirky, under-the-radar side of science and, while pregnant, found herself wondering how her baby's gestation might tinker with her body - and how her body was shaping the future development of her unborn child. She started to ask questions that her doctors couldn't always answer and uncovered unexpected answers in scientific journals. Why do thinner women have more daughters? What do fetuses actually learn when they eavesdrop? How does Grandma's diet affect her unborn grandchild? Drawing on her scientific background Jena Pincott writes about the hidden science of pregnancy. Here is a fascinating supplement to the typical maternity guide, delving into biology, neuroscience, evolutionary psychology and epigenetics, *Do Chocolate Lovers Have Sweeter Babies* gives a deeper understanding to what is physically, and psychologically, happening to a woman during pregnancy. Where does the maternal instinct come from? Does stress sharpen your baby's mind - or dull it? What mind control chemicals are in breast milk, sweat and tears? It will satisfy every pregnant woman's curiosity about life's most mysterious process through the newest, most interesting and, sometimes, controversial discoveries being made by science.

The Psychology of Physical Attraction Viren Swami 2008

This book begins the task of providing a scientific look at physical attraction by presenting an overview of scholarly work on physical beauty, culture, evolution, and other aspects of human attractiveness. It begins by discussing the role of evolution in the development of what it means to be "attractive" in contemporary society. It provides a general overview of evolutionary psychology and mate choice, as well as an in-depth focus on physical characteristics such as physical symmetry, body weight, and ratios, and youthfulness. It goes on to explore the role of societal and cultural ideals of beauty through a discussion of the social psychology of human beauty. Finally, the "morality" of physical attractiveness is examined, looking at issues such as discrimination on the basis of looks, body image and eating disorders, and cosmetic surgery.

What Makes Your Brain Happy and Why You Should Do the Opposite David Disalvo 2011-11-15

This book reveals a remarkable paradox: what your brain wants is frequently not what your brain needs. In fact, much of what makes our brains "happy" leads to errors, biases, and distortions, which make getting out of our own way extremely difficult. Author David DiSalvo presents evidence from evolutionary and social psychology, cognitive science, neurology, and even marketing and economics. And he interviews many of the top thinkers in psychology and neuroscience today. From this research-based platform, DiSalvo draws out insights that we can use to identify our brains' foibles and turn our awareness into edifying action. Ultimately, he argues, the research does not serve up ready-made answers, but provides us with actionable clues for overcoming the plight of our advanced brains and, consequently, living more fulfilled lives.
