**Transdisciplinary Engineering: A Paradigm Shift** C.-H. Chen 2017-07-20 Concurrent Engineering is based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). Its main goal is to increase the efficiency and effectiveness of the PCP and reduce errors in the later stages, and to incorporate considerations for the full lifecycle, through-life operations, and environmental issues of the product. It has become the substantive basic methodology in many industries, and the initial basic concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book presents the proceedings of the 24th ISPE Inc. International Conference on Transdisciplinary (formerly: Concurrent) Engineering (TE 2017), held in Singapore, in July 2017. The 120 peer-reviewed papers in the book are divided into 16 sections: air transport and traffic operations and management; risk-aware supply chain intelligence; product innovation and marketing management; human factors in design; human engineering; design methods and tools; decision supporting tools and methods; concurrent engineering; knowledge-based engineering; collaborative engineering; engineering for sustainability; service design; digital manufacturing; design automation; artificial intelligence and data analytics; smart systems and the Internet of Things. The book provides a comprehensive overview of recent advances in transdisciplinary concurrent engineering research and applications, and will be of interest to researchers, design practitioners and educators working in the field.

De metamorfose van de wereld Ulrich Beck 2018-02-12 De bekende socioloog Ulrich Beck brengt met *De metamorfose van de wereld* een nieuw perspectief op (klimaat-)verandering. Onze steeds complexere wereld verandert niet meer zomaar, er doen zich metamorfosen voor, radicale vormen van transformatie. Ze dwingen ons om ons denken te veranderen en niet te blijven hangen in oplossingsgericht denken. Verleggen we onze focus naar de goede kanten van het slechte, dan kunnen we de kosmopolitische houding ontwikkelen die nodig is om belangrijke

uitdagingen als klimaatverandering en digitalisering aan te gaan.

Writing Reaction Mechanisms in Organic Chemistry Audrey Miller 2012-12-02 Presentation is clear and instructive: students will learn to recognize that many of the reactions in organic chemistry are closely related and not independent facts needing unrelated memorization. The book emphasizes that derivation of a mechanism is not a theoretical procedure, but a means of applying knowledge of other similar reactions and reaction conditions to the new reaction. n Brief summaries of required basic knowledge of organic structure, bonding, stereochemistry, resonance, tautomerism, and molecular orbital theory n Definitions of essential terms n Typing and classification of reactions n Hints (rules) for deriving the most likely mechanism for any reaction

*Alles behalve de waarheid* Gillian McAllister 2017-11-21 Gillian McAllister schreef met *Alles behalve de waarheid* een intense roman over wat je elkaar vertelt en wat niet, en over de alles

overwinnende kracht van de liefde. Het begon allemaal met een e-mail. Het scherm van Jacks iPad lichtte midden in de nacht op. Het was niet Rachels bedoeling om te kijken. Ze houdt van Jack en draagt zijn kind. Ze vertrouwt hem, ook al kennen ze elkaar nog maar kort. Maar nu Rachel het bericht gezien heeft, laat het haar niet meer los en stort haar leven als een kaartenhuis in. Waarom loog Jack over zijn verleden? Wat heeft hij precies te verbergen? Heeft Rachel niet het recht om de waarheid te weten? Maar is ze zelf wel oprecht naar Jack over haar eigen verleden?

**Magnetic Resonance Spectroscopy of Degenerative Brain Diseases** Gülin Öz 2016-07-27

The proposed book will act as a guide for scientists and clinicians to the unique information that MRS can provide. It will be a comprehensive overview of clinical and pre-clinical MRS applications and potential clinical utility of MRS biomarkers in degenerative brain diseases from leading experts in the field. MRS has proven to be a powerful complementary tool to MRI for the diagnosis and monitoring of disease progression and response to treatment because it can detect changes in cell density, cell type, and biochemical composition, not just structural changes. As the population in the developed world continues to age, neuroimaging for diagnosis, prognosis, and therapy monitoring of neurodegenerative diseases becomes increasingly important and there has been a recent surge of clinical and pre-clinical applications of MRS indicating that this technique can provide robust and non-invasive biomarkers of degeneration.

**Human and Mediated Communication around the World** Marieke de Mooij 2013-10-07 This book is unique in the sense that it offers a comprehensive review and analysis of human communication and mediated communication around the world. This is one of the first attempts to do so in a systematic, comprehensive way. It challenges the assumption that Western theories of human communication and mass communication have universal applicability. It surveys the applicability of mass communication theories to other than Western cultures. The book explains the influence of culture on all forms of communication behavior, be it personal, mediated or mass communication. It presents communication theories from around the world, incorporating a vast body of literature from Europe, Asia, Africa and Latin America. This updated information on important international perspectives that includes both interpersonal and mediated communication is presently not readily available in other sources. The book offers an integrated approach to understanding the working of electronic means of communication that are hybrid media combining human and mediated communication. These new media that are often presented as universal are even more culture-bound than the traditional media.

Grijze ogen Anne Bishop 2016-11-18 Meg vreest dat het wankele evenwicht tussen mensen en Anderen voorgoed verstoord is - want wat de mensen zijn vergeten, is dat de natuur altijd wint... Het vierde boek over Meg, Simon en de Anderen. Anne Bishop is de auteur van de Urban Fantasy-serie 'De Anderen' over heldin Meg Corbyn. Eerdere delen 'Rode letters' 'Zwarte veren' en 'Zilveren zicht' vonden moeiteloos hun weg naar de fans. 'Grijze ogen' is het vierde deel in de serie. Hoeveel menselijkheid willen de terra indigine bewaren? Dat is de vraag waar Meg, Simon, Vlad en de andere leiders van het Stadspark voor staan. De haatzaaiers van Mensen Altijd Eerst verklaren de oorlog aan de Anderen - maar ze hebben geen idee wat ze met hun bloedlust wakker maken. Dit gevecht komt voor de Anderen neer op een simpele vraag: Hoeveel menselijkheid willen de terra indigine bewaren? Het is oorlog, maar de mensen zijn vergeten dat

ze niet alleen de gedaantewisselaars tegenover zich hebben - ze hebben zojuist de oorlog verklaard aan de wereld zelf.

**Landscape Infrastructure** Ying-Yu Hung 2011-01-01 Infrastructure is a much discussed topic within the field of landscape architecture. It regards the entire urban and rural space as a network that calls for an integrated planning and urban design approach. Natural and man-made infrastructures are viewed as forming a single, overarching whole. The book examines this robust and ecologically sustainable approach with essays by well-known experts in the field. It also documents 14 international case studies by SWA landscape architects and urban designers, among them the technologically innovative roof domes for Renzo Piano's California Academy of Science in San Francisco, the restoration of the Buffalo Bayou in Houston, and several master plans for ecological corridors in China and Korea. Other projects develop smart re-use concepts for railroad tracks that no longer serve their original purpose, such as Kyung-Chun railway in Seoul or Katy Trail in Dallas. All projects are described extensively with technical diagrams and plans. The publication offers ideas for reinventing, repurposing, and repositioning infrastructure as a viable medium for addressing issues of ecology, transit, urbanism, and habitat.

Immediate Early Genes and Inducible Transcription Factors in Mapping of the Central Nervous System Function and Dysfunction L. Kaczmarek 2002-07 That molecular neurobiology has become a dominant part of neuroscience research can be credited to the discovery of inducible gene expression in the brain and spinal cord. This volume deals with genes, whose expression patterns in the vertebrate central nervous system were the first to be revealed and then the most extensively investigated over the last 15 years. Immediate early genes (IEG) and their protein products, especially those acting as regulators of transcription (inducible transcription factors, ITF) have proven to be very valuable tools in functional neuroanatomy and neurophysiology, as they are rapidly and transiently induced in specific neurons in response to various modes of stimulation. Thus, they have been used to map neuronal populations selectively responsive to a variety of conditions, such as sensory and learning experience, electrical stimulation of specific circuits, seizures, and neurodegeneration. This single volume, written by the most prominent authors in the field, brings together for the first time information about the most widely studied IEG/ITF in a whole variety of phenomena of neuronal activation. It starts with a critical appraisal of the technologies employed for the studies on gene, protein, and transcription factor activity in the nervous system. Several chapters present exhaustive examples of expression patterns of the ITF in "vocal" avian brain, mammalian brain sensory regions, areas involved in regulation of circadian rhythms, and the spinal cord. The next parts cover functional and regular aspects of individual IEG/ITF expression: c-fos in learning and memory, c-jun and others in neuropathology and neuronal stress responses, Elk-1, egr family, and CREB in neuronal plasticity and learning. This volume will be useful as a major reference on this topic. Furthermore, it attempts to unravel the seemingly overwhelming complexity of the phenomena of gene expression in the central nervous system.

The Science of Crime Scenes Max M. Houck 2012-12-17 The recent National Research Council's

report on forensic science calls for more fundamental education and training in the science behind the discipline. Nowhere is this need greater than in crime scene investigations. Long seen as merely "bagging and tagging," crime scene investigation and processing is now a complex process, involving numerous sciences and methods. The Science of Crime Scenes addresses the science behind the scenes and demonstrates the latest methods and technologies in depth. The Science of Crime Scenes covers the philosophy of crime scenes as historical events, the personnel involved at a scene (including the media), the detection of criminal traces and their reconstruction, and special crime scenes, such as mass disasters and terroristic events. Written by an international trio of authors with decades of crime scene experience, The Science of Crime Scenes is the next generation of crime scene textbooks. Offers a science-based approach to crime scene investigation Includes in-depth coverage of disasters and mass murder, terror crime scenes, and CBRN (chemical, biological, radioactive and nuclear) - not covered in any other text Written by an international trio of authors with decades of crime scene experience Instructor website with lecture slides, test bank, outlines, definitions, and activities, and a student companion site with an image collection

**Springer Handbook of Nanomaterials** Robert Vajtai 2013-08-20 The Springer Handbook of Nanomaterials covers the description of materials which have dimension on the "nanoscale". The description of the nanomaterials in this Handbook follows the thorough but concise explanation of the synergy of structure, properties, processing and applications of the given material. The Handbook mainly describes materials in their solid phase; exceptions might be e.g. small sized liquid aerosols or gas bubbles in liquids. The materials are organized by their dimensionality. Zero dimensional structures collect clusters, nanoparticles and quantum dots, one dimensional are nanowires and nanotubes, while two dimensional are represented by thin films and surfaces. The chapters in these larger topics are written on a specific materials and dimensionality combination, e.g. ceramic nanowires. Chapters are authored by well-established and well-known scientists of the particular field. They have measurable part of publications and an important role in establishing new knowledge of the particular field.

**The Silent Revolution in Cancer and AIDS Medicine** Heinrich Kremer 2012-09-10 Examining all the major research data since the 1940s, this book challenges two orthodox medical models: HIV as the cause of AIDS, and random genetic mutations as the cause of cancer. Based on the recent findings from Evolutionary Biology and Nitric Oxide research, it presents a fundamentally new understanding of the human cell, its double genome split between the cell nucleus and the mitochondria, and the role of energy production and signal modulation for immune reactions and carcinogenesis. Finally, it explains the concept of a new Cell Symbiosis Therapy® for the treatment of all chronic diseases, including cancer. Now available in English for the first time, this book is a must-read for doctors, patients and anyone following the cutting edge of biology and immunology. With the blasting open of such doors of knowledge, the medical world will never again be the same. Heinrich Kremer, MD, Medical Director Emeritus was, from 1968-1975, head of social therapy for addicts, sexual offenders and people with personality disorders at the Berlin Tegel prison which was the pilot project for the reform of the German penal system. In 1988 he resigned as medical director of a model clinic specializing in youth drug addiction due to differences on medical ethics regarding the HIV test and AIDS therapy. From 1993-1999 as collaborating member of the Study Group for Nutrition and Immunity (Bern) he investigated together with Prof. Alfred Hässig the mechanisms occurring in AIDS defining illnesses and in cancer. Since the publication of this book in German in 2001 he has been in demand as a lecturer on the treatment of chronic diseases, working today as senior consultant in a growing medical network for Cell Symbiosis Therapy®.

**Executive Function** Sandra A. Wiebe 2017-07-28 Executive Function: Development Across the Life Span presents perspectives from leading researchers and theorists on the development of executive function from infancy to late adulthood and the factors that shape its growth and decline. Executive function is the set of higher-order cognitive processes involved in regulating attention, thoughts, and actions. Relative to other cognitive domains, its development is slow and

decline begins early in late adulthood. As such, it is particularly sensitive to variations in environments and experiences, and there is growing evidence that it is susceptible to intervention – important because of its link to a wide range of important life outcomes. The volume is made up of four sections. It begins with an overview of executive function's typical development across the lifespan, providing a foundation for the remainder of the volume. The second section presents insights into mechanisms of executive function, as provided by a variety of methodological approaches. The third and fourth sections review the current research evidence on specific factors that shape executive function's development, focusing on normative (e.g., bilingualism, physical activity, cognitive training) and clinically relevant (e.g., substance use, neurodegenerative disease) developmental pathways.

Simon Wolfgard, gedaantewisselaar en leider van het Stadspark in Lakeside, weet niet wat hem ertoe beweegt om Meg de baan te geven van Contactmens. Maar als hij Megs geheim ontdekt, moet hij beslissen of zij het waard is om de broze vrede tussen mensen en de Anderen op het spel te zetten. Anne Bishop is een 'New York Times'-bestsellerauteur die met haar boeken meerdere prijzen heeft gewonnen. Megs verhaal gaat verder in haar tweede boek, 'Zwarte veren'. 'Anne Bishop weet zulke levensechte personages neer te zetten dat ik het gevoel kreeg echt in haar wereld rond te lopen. Ik ben verslaafd aan deze serie, kom op met dat volgende deel!' – 'USA Today'
