means $c + d = 2$ $2c + 3d = 5$
 $3c + 4d = 7$: I leave the solution to you. The vector $b = (2; 5; 7)$ does lie in the plane of v and w . If the 7 changes to any other number, then b won't lie in the plane—it will not be a combination of v and w , and the three equations will have no solution. Now I can describe the first part ...

This section should be covered relatively rapidly to get quickly to the actual solution methods in the next sections. Equations (1)–(3) are just examples, not for solution, but the student will see that solutions of (1) and (2) can be found by calculus, and a solution y_{ex} of (3) by inspection. Problem Set 1.1 will help the student with the ...
